

# Vontobel Fund – TwentyFour Absolute Return Credit Fund

This Commentary is a marketing communication for professional UK investors only

## Market Commentary

- The 'risk-off' tone that developed in February carried through into March as US President Donald Trump continued to drive forward his tariff agenda. Trump began the month by announcing the imposition of a 25% tariff on all aluminium and steel exports to the US, which prompted reciprocal measures from trading partners. This included Canada, which imposed counter-tariffs of 25% on over \$20bn of US goods. By the end of the month, the US had imposed 25% tariffs on all automotive imports ahead of 2 April, when Trump is expected to apply further sweeping tariffs on US imports. Investor scepticism around the impact of such tariffs on US GDP increased, with economic growth forecasts revised as business confidence declined amid uncertainty about policy and the wider macroeconomic backdrop. The effects are also expected to be compounded by accelerating inflation, prompting economists' fears of stagflation in the US.
- To compound the market volatility, Germany unexpectedly announced plans for one of the largest fiscal regimes in history as leaders of the Social Democrats and Christian Democrats said they were set to approve three material changes to the country's debt limits. These included €500bn for infrastructure investment, an exemption from the 'debt brake' for defence spending above 1% of GDP and a rise in the net borrowing cap for federal states from 0% to 0.35% of GDP. The announcement resulted in a sharp move wider in German bund yields as investors expect it to lead to an increase in the supply of bonds in both the near and medium term. At the same time, they expect it to promote economic growth, thereby reducing the need for the European Central Bank to cut rates at the pace the market had previously anticipated. As a result, bunds underperformed US Treasuries in March.
- Spreads across high yield indices widened noticeably over the month as investors grew wary of the impact of impending tariffs on corporate profitability. Spread decompression was also seen among investment grade corporates, with US corporate spreads widening more than their European counterparts. Primary markets were mostly quiet, before they sparked into life towards the end of March as issuers attempted to launch deals ahead of the US tariff announcements on 2 April. Despite the weaker credit environment, the majority of deals were met with strong investor demand, pricing at levels markedly tighter than initial indications, thanks to books that were many times oversubscribed.

## Portfolio Commentary

- Asset-backed securities led returns for the month, while senior non-financials also performed better than other credit sectors.
- Higher beta positions have started to see modest spread widening in the face of earnings and equity volatility, together with proposed tariffs from the US.
- The portfolio retains a defensive position, with a lower credit beta than normal, a low spread duration and 15% in government bonds.

## Market Outlook and Strategy

- Germany's recently announced infrastructure and defence spending package is expected to provide a large fiscal boost over the next 10 years. The spending is likely to increase the country's debt-to-GDP ratio to the low 70% in the next decade, which should be positive for economic growth, although it will take many quarters to start bearing fruit.
- US tariff threats have weighed on spreads and investors need the details to determine what the market impact will be. For now, a defensive stance in the portfolio is warranted.
- Credit spreads reached the tightest levels since the global financial crisis, but have now started to widen. While the team does not have default concerns on any portfolio holdings, the risk of further spread widening is the base case. Thus, the portfolio retains lower credit spread duration and beta than the historical average for mark-to-market reasons.

Where ratings are available from the credit rating agencies specified in the portfolio's rating methodology, including S&P Global Ratings Inc, Moody's Investor Services Inc & Fitch Ratings Inc, TwentyFour will use the highest of the available ratings. Moody's® assigns a rating of Aaa as the highest to C as the lowest credit quality rating. S&P® assigns a rating of AAA as the highest to D as the lowest credit quality, Fitch assigns a rating of AAA as the highest to D as the lowest credit quality. Additionally, where no rating has been requested, or there is insufficient information on which to base a rating, a rating agency may assign a rating of NR (Not Rated). For unrated sovereign issues TwentyFour will adopt the issuing sovereign's credit rating. The average credit quality (ACQ) is provided to indicate the average credit rating of the portfolio's underlying investments' rating and may change over time. The portfolio itself has not been rated by an independent rating agency and is provided for informational purposes only. The ACQ is determined by using a market-weighted equivalent rating and rounding to the nearest rating. For unrated bonds and cash and equivalents, when calculating the ACQ ratings TwentyFour will determine an internal rating by considering all relevant factors, including but not restricted to, the relationship between the bond's maturity and its price and/or yield, the ratings of comparable bonds, the issuer's financial statements and the issuer's credit rating if available. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. Derivative positions are not reflected in the ACQ.
